

# UTILISYNC

## DOCUMENTATION AUTOMATION

You make the observations, we'll do the rest.

# General/Overview

## Unique Proposition

UtiliSync is a GIS-centric software platform that empowers organizations to simply and efficiently automate work management and documentation related to their maintenance and inspection activities.

## Key Features

With UtiliSync, field inspectors can:

- **Attach multiple photos** with a single tap
- Electronically **sign** the form
- **Pre-populate form fields** from up to 6 different sources (GIS data, user data, etc.)
- Automatically **generate PDF reports** that are formatted to your specification
- Automatically **distribute PDF reports** to a dynamic email list
- Automatically **file PDF reports** for future reference

Most inspectors report UtiliSync forms are **300% faster to complete** compared to paper. Managers know which activities

## Use Cases

UtiliSync is ideal for inspections related to:

- Stormwater
- Wastewater
- Culinary Water
- Street Signs
- Construction Observations
- 811 Utility Locate Requests
- Commercial Buildings(Fire Departments)
- Restaurant (Board of Health)
- Telecommunication
- Material Testing
